How to Add SPF and DKIM Records to Dreamhost

Adding your TXT based SPF Record

- From within your Dreamhost account, navigate to your account Menu.
- Click "**Domains.**"
- Click "**Manage Domains**."
- Click "DNS."
- Scroll to **Add a Custom DNS Record.**
- Enter **@** as the **Name**.
- Select **TXT** from the type dropdwon menu
- Paste the text you copied from your Manage/Integrate page under SPF settings as the **Value.**
- Click "**Add Record Now**."

Adding your TXT based DKIM Record

- Scroll to **Add a Custom DNS Record.**
- Paste the text you copied from your Manage/Integrate page under DKIM settings as the **Name**
- Select **TXT** from the type dropdwon menu
- Paste the text you copied from your Manage/Integrate page under DKIM settings as the **Value.**
- Click "**Add Record Now**."
